

# AQUARIUS *plus*

Water-cooled chillers with heat pump function  
with screw compressors

## An MTA first: water-cooled chillers with class A efficiency

Opting for the highest efficiency class in the centralised air conditioning system leads to numerous benefits: reduced energy consumptions; minimised operating costs; the avoidance of unnecessary dispersion of resources; and most importantly, limited direct and indirect environmental impact. The new AQUARIUS PLUS chiller range has been specially designed to maximise the cooling properties of refrigerant R134a and can be used to optimal effect in those applications in which the effective thermal load is lower than the nominal unit capacity for the majority of the system working cycle. The technical solutions adopted, combined with continuous compressor capacity control ensuring delivery of exactly the cooling capacity required by the installation, offer ESEER and IPLV seasonal performance indices which are at the very top of the category.

## BENEFITS

- 19 base models with single or twin compressors to perfectly match each specific system requirement;
- Class leading nominal and seasonal energy efficiency ratings;
- Reduced noise levels, thanks also to the availability of two differing acoustic versions;
- Easy access to all components;
- Continuous control of the cooling capacity.

## STANDARD CHARACTERISTICS

- Refrigerant R134a;
- Electronic expansion valves as standard on models 1401-2401 and 2202-4802, optional for the remaining models;
- Semi-hermetic dual screw compressors expressly developed for use with R134a;
- Evaporator and shell and tube condensers optimised for operation with R134a;
- Easily adapted to heat pump operation;
- Check valve on compressor discharge, shut-off valves on suction and discharge lines;
- Shut-off valve and solenoid valve on the liquid line;
- Start-up with low peak current;
- Suitable for outdoor installation.

Semi-graphic backlit microprocessor display

Maximum ease of access to all components

Electronic thermostatic valves

Continuous control of the cooling capacity

## MAIN OPTIONS

- Pressure control or servo-controlled valves for condensing pressure control;
- Condensers for tower or well water;
- Duplicated or simple remote control;
- Connection to supervision systems;
- Antivibration dampers;
- Matching cooling towers or dry coolers available on request;
- Version for water temperatures down to -10 °C;
- Power factor correction condensers;
- Heat recovery exchangers (in dedicated unit frame).

## A SAVING WHICH YOU CAN'T IGNORE

All data refers to standard units at the following nominal conditions:

**Tower water:** evaporator water inlet/outlet temperature 12-7 °C, condenser water inlet/outlet temperature 30-35 °C;

**Well water:** evaporator water inlet/outlet temperature 12-7 °C, condenser water inlet/outlet temperature 15-30 °C;

Heating capacity = Cooling capacity + Absorbed power.

ESSER calculated according to EECAC; IPLV calculated according to ARI Standard 550/590-2003.

Sound pressure level in free field at 10 m from electrical panel side and 1.6 m from ground.
